

Mitigating COVID-19

All layers are important because each layer is imperfect.

Work from home

Learn and work from home if symptomatic in any way and for high-risk populations

Masks

Properly wearing masks makes our community exponentially safer

Limit close contacts

Restrict mixing, reduce density, and physically distance when you can

Ventilation

Enhanced ventilation, filtration, indoor air quality and open-air learning spaces reduce airborne transmission risk

Hand hygiene

Washing your hands with soap and water and avoiding touching your eyes, nose and mouth is one of the simplest ways you can protect yourself and others from illnesses. Use alcohol-based hand sanitizer when soap and water is unavailable.

Cleaning

Diligent cleaning and disinfecting of surfaces, especially high-touch areas and items used by multiple people

Testing

Viral testing for return to campus, diagnostic purposes and surveillance, if available and timely
